EBUSCO 3.0

GAMECHANGER IN THE BUS INDUSTRY

With a changing playing field, and the worldwide shift towards EV, Ebusco saw the need to revolutionize the industry standard. With a multifunctional team of key experts in the field of aerospace, automotive, and electronics, a completely new approach was taken in the development of electric buses, focusing on lightweight. The result of this approach: A lightweight bus with the lowest TCO in the market.

By using composite materials in the main structure, Ebusco has developed a lightweight bus that has an effect on multiple aspects. Not only does the Ebusco 3.0 have the most efficient energy consumption, in addition, the bus is equipped with single tires, features insulated walls for optimal climate control, and has an extended lifespan of up to 25 years. A design focused on drivers, passengers and all involved with the operation of the bus.

WHEN FUNCTIONALITY MEETS DESIGN

The functional approach of a lightweight concept, allowed immediate opportunities to optimize the design for user comfort. Although a sufficient range is extremely important, it was not the only factor taken into consideration when the Ebusco 3.0 was created.

The Ebusco 3.0 is made to move people, meaning that this bus offers a comfortable, safe, and reliable travel experience for both passengers and drivers.
